Physica D 42 (1990) 451–452
North-Holland

ANALYTIC SUBJECT INDEX

abduction 281
abstract perception 322
adaptability 111
adaptation 66, 188
analogy 322
anomaly detection 66
artificial life 111
assembly/disassembly of microtubules 428
asynchronous algorithms 293
autocatalytic networks 153
automata 347

bifurcation theory 365
Boolean networks 135, 213
brain models 428
busy beaver problem 85

category learning 335
cellular automata 12, 111, 273, 428
cerebellum 396
chaos 385
classification 257
classifier systems 153, 202, 213
co-evolution 48, 135, 228
cognition 428
cognitive models 322, 335
collective phenomena 48
combinatorial optimization 293
complexity classes 12
complexity measure 111
computation 12
computational ecosystems 48
computational geometry 307
computer arithmetic 99
computer virus 111
concepts 322
concurrent computation 38
conditional branching 99
connectionism 153, 335
cooperative algorithms 38
cortex 385
cortical oscillations 365
credit assignment 249
critical slowing-down 12
cytoskeleton 428

deterministic chaos 99
diagnosis 66
distributed computing 293

emergence 322
emergent behavior 244
emergent computation 66, 111, 249, 307
emergent systems 85
energy function 257
evolution 235
evolvability 135
explanation 281

fitness landscapes 135
fractals 99

genetic algorithms 188, 244, 249

halting probability 85
halting problem 12, 85
host 235

IEEE Standard 754 99
immune networks 153

learning 202, 213, 249, 265
learning algorithms 307, 365, 428
local optima 228
lookahead 188
loose symbiosis 235

machine learning 188, 244
metadynamics 153
microtubules 428
motor control 396
mutation 235

natural selection 428
neural architecture 411
neural models 335
neural networks 153, 244, 257, 265, 273, 281, 307, 347, 365, 385, 396, 428
neuromagnetic measurements 411
neurons 385
nonlinear dynamical systems 202, 213
nonlinear dynamics 48, 385

open-ended evolution 111
optimization 228
origin of life 111

parallel processing 293
parallel-processing networks 135
parasites 228, 235
pattern recognition 244, 365
perception 281
perceptron 249
phase transitions 12
prediction 48, 396
prototypes 281

Red Queen hypothesis 228
representing normal behavior 66
robotics 307, 347

search 265
self-organization 111
simulated annealing 293
specialization 257
statistical physics 273
stochastic environments 202
strange attractors 385
symbiosis 235
symbol systems 335
synaptic noise 265
synaptic plasticity 428

TIT for TAT 235
transients 12
Turing machines 85, 347

universal law 38
unsupervised learning 257

vision 347, 385, 411
von Neumann machine 111
